                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A. Introns: 21/2; 422/1
C.Function: 21/2; 422/1
C.Function: actalyzes the oxidation of an aldehyde to an acid using NAD+ and water
A.Boscription catalolism
A.Note: enzymes with this activity are involved in diverse metabolic pathways in various
C.Superfamily: aldehyde dehydrogenase (NAD+); aldehyde dehydrogenase homology
C.Keywords: alcohol metabolism: NAD: oxidoreductase
F:57-318/Domain: aldehyde dehydrogenase homology <ALDD>
                                                                                                                                                                       A29055
all dehydrogenase (NAD) (EC 1.2.1.7) • Emericella nidulans
clobedies: Bmericella nidulans, Aspergillus nidulans
Clobetes: Bmericella nidulans, Aspergillus nidulans
Clobetes: 30-Jun-1988 #sequence_revision 31-Jan-1997 #text_change 03-Jun-2002
Clocession: A29055
E.Pickett, M.; Gwynne, D.I., Buxton, F.P.; Elliott, R.; Davies, R.W.; Lockington, R.A.;
Gene 51, 217-226, 1987
A.Fitle: Cloning and characterization of the alda gene of Aspergillus nidulans.
A.Reference number: A29055; MUIH:87248080; FMID: N036552
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       VEEAVQAADPAPSNISSWNITIPPIDEGKALYRLAELIEQDKLVIASIETLDNGKAISSSEG 120

Additionable dehydrogenase (NAD) (EC 1.2.1.3) 2 precursor, mitochondrial measons aldehydrogenase AHD MI
N.Alternate names: aldehydrogenase AHD MI
C.Species: Mus musculus (house mouse)
C.Date: 02-Jul-1996 #sequence_revision 31-Jan 1997 #text change 03 Jun 2002
C.Accession: 148966; S50106; 157960
E.Chang, C.: Yoshida, A.
Gene 148, 311-336, 1994
A.Title: Cloning and characterization of the gene encoding mouse mitochondrial aldeby
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A. C)Complex: homotetramer
C)Function: catalyzes the oxidation of an aldehyde to an acid using NAD+ and water
A Pathway: ethanol catalobilis activity are involved in diverse metabolic pathways in variance (NAD+), aidehyde dehydrogenase homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              C.Saperfamily aldebyde debyttequease (NAD+), aldebyde debydrogenase homology
